Abstract

- The Personalized Career Roadmap Builder is a web-based application developed to help students plan their career paths in a structured and organized manner.
- Many students face confusion while choosing a career due to lack of proper guidance and clear information about required skills and learning paths.
- This project aims to provide a platform where users can enter their interests, preferred career field, or career goals.
- Based on the user input, the system generates a personalised roadmap that outlines the necessary skills, learning steps, and milestones required to achieve the desired career.
- The roadmap helps students understand the sequence of learning and the important stages involved in reaching their professional goals.
- The project demonstrates how web technologies can be used to create practical tools that assist students in making informed career decisions.
- Overall, the system helps users gain clarity, set achievable goals, and follow a structured path toward their chosen career.

Existing System

- Students usually rely on general career advice from websites or blogs.
- Career guidance is often taken from teachers, friends, or family members.
- Most platforms provide generic career information, not personalized guidance.
- Students have to search different websites to find required skills, courses, and career paths.
- There is no structured roadmap that clearly shows the step-by-step path to achieve a specific career.
- Due to this, students often feel confused and lack proper direction while planning their careers.

Proposed System

The proposed system is a **web-based application** that helps students create a **personalized career roadmap** based on their interests and career goals.

Users can enter their **preferred career field or interests**, and the system generates a **step-by-step roadmap** showing the skills and learning stages required.

The platform provides **structured guidance**, helping students understand what they need to learn and in what order.

It reduces confusion by presenting **clear milestones such as learning skills, building projects, and gaining experience**.

The system offers a **simple and user-friendly interface**, making it easy for students to explore different career paths.

By using technology to organize career information, the proposed system helps students **plan their future more effectively and make inform**

System Architecture

User Interface (Frontend)
The user interacts with the website by entering their career interests or goals.

Input Processing
The system processes the user input to understand the selected career path.

Career Database / Data Mapping
The system checks stored information about different careers and their required skills.

Roadmap Generation Module
Based on the selected career, the system generates a step-by-step roadmap including skills, learning stages, and milestones.

Output Display
The generated roadmap is displayed on the website for the user to view.

Project Modules

1. User Input Module

- This module allows users to enter their **career interests, skills, or preferred career field**.
- It collects the required information from the user through a simple form interface.

2. Career Data Module

- This module stores information about **different career paths and the skills required for each career**.
- It acts as a reference database for generating career roadmaps.

3. Roadmap Generation Module

- This module processes the user input and **matches it with the stored career data**.
- It generates a **step-by-step career roadmap** including skills, learning stages, and milestones.

4. Output Display Module

- This module displays the **generated career roadmap** to the user in a clear and structured format.
- Users can easily understand the steps required to achieve their career goals.

5. User Interface Module

- This module provides a **simple and interactive website interface**.
- It ensures that users can easily navigate and interact with the system.

Objectives

1. To develop a **web-based platform** that helps students plan their career paths effectively.
2. To provide a **personalized career roadmap** based on the user's interests and career goals.
3. To help students understand the **skills and learning steps required** for different career options.
4. To reduce confusion in career planning by providing **clear and structured guidance**.
5. To create a **simple and user-friendly interface** that allows users to easily explore career paths.
6. To demonstrate how **web technologies can be used to build useful tools for students**.

Co’s Attainments - FWD

1. co-1 - Internal Fundamentals ,
2. HTML Structure and basic CSS

```html
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta name="viewport" content="width=
    <title></title>
  </head>
  <body>
    <div id="root"></div>
    <script type="module" src="/src/main.
  </body>
</html>
```

2.CO-2 -Forms,semantic experience and advanced CSS layout

```css
body{
font-family: Arial;
margin:0;
background: #f5f7fb;
}

header{
display:flex;
justify-content:space-between;
padding:20px;
background: #111;
color: white;
}

nav a{
margin-left:20px;
color: white;
text-decoration:none;
}

.hero{
text-align:center;
```

3. CO-3 -java script programing fundamentals

```
const form = document.getElementById("careerForm");
const result = document.getElementById("roadmapResult");

const roadmaps = {

developer:[
"Learn Programming Basics",
"Learn Data Structures",
"Build Projects",
"Learn Web Development",
"Apply for Internships",
"Apply for Jobs"
],

datascientist:[
"Learn Python",
"Statistics",
"Machine Learning",
"Data Visualization",
"Build Data Projects"
],

designer:[
```

4.CO-4 DOM manipulation,Events and

```
fetch("https://api.example.com/courses")
.then(res=>res.json())
.then(data=>{
console.log(data);
});
```

CO- 5 Advanced Web Development Github Version Controls & Deployment

Conclusion

The **Personalized Career Roadmap Generator** helps users explore career paths and understand the steps required to achieve their goals. By allowing users to input their desired career, the system generates a structured roadmap that outlines key skills, learning stages, and actions needed to progress in that field.

Additional features such as the **career quiz, progress tracker, and interactive interface** make the platform more engaging and useful for students who are unsure about their future career direction.

Overall, this project demonstrates how **web technologies like HTML, CSS, and JavaScript** can be used to create an interactive tool that supports career planning and skill development. In the future, the system can be expanded with **more career options, AI-based recommendations, and integration with learning platforms** to provide even more personalized guidance.
